About the Book

A unified, coherent treatment of current classifier ensemble methods, from fundamentals of pattern recognition to ensemble feature selection, now in its second edition

The art and science of combining pattern classifiers has flourished into a prolific discipline since the first edition of Combining Pattern Classifiers was published in 2004. Dr. Kuncheva has plucked from the rich landscape of recent classifier ensemble literature the topics, methods, and algorithms that will guide the reader toward a deeper understanding of the fundamentals, design, and applications of classifier ensemble methods.

Salient Features

Coverage of Bayes decision theory and experimental comparison of classifiers

Essential ensemble methods such as Bagging, Random forest, AdaBoost, Random subspace, Rotation forest, Random oracle, and Error Correcting Output Code, among others

Chapters on classifier selection, diversity, and ensemble feature selection

Table of Contents

Preface xv

Acknowledgements xxi

1. Fundamentals of Pattern Recognition 1

2. Base Classifiers 49

3. An Overview of the Field 94

4. Combining Label Outputs 111

5. Combining Continuous-Valued Outputs 143

6. Ensemble Methods 186

7. Classifier Selection 230

8. Diversity in Classifier Ensembles 247

9. Ensemble Feature Selection 290

10. A Final Thought 326

References 327

About the Author

Ludmila Kuncheva :- Ludmila Kuncheva is a Professor of Computer Science at Bangor University, United Kingdom. She has received two IEEE Best Paper awards. In 2012, Dr. Kuncheva was awarded a Fellowship to the International Association for Pattern Recognition (IAPR) for her contributions to multiple classifier systems.
