

Three-Dimensional Potential Flows
Surface Waves
Part III: Viscous Flows of Incompressible Fluids
Exact Solutions
Low Reynolds Number Solutions
Boundary Layers
Buoyancy-Driven Flows
Part IV: Compressible Flow of Inviscid Fluids
Shock Waves
One-Dimensional Flows
Multidimensional Flows
Part V: Methods of Mathematical Analysis
Some Useful Methods of Analysis
Appendix A: Vector Analysis
Appendix B: Tensors
Appendix C: Governing Equations
Appendix D: Fourier Series
Appendix E: Thermodynamics

About the Author

I.G. Currie :- Iain G. Currie is a Professor Emeritus in the Department of Mechanical and Industrial Engineering at University of Toronto, Canada. He holds a Bachelor's degree in Mechanical Engineering from the University of Strathclyde, a Master's degree from the University of British Columbia, and Ph.D. from the California Institute of Technology. He has taught fluid mechanics at the undergraduate and graduate levels for many years. His research involves fluid structure interactions, and he has become involved in studying low Reynolds number flows of both Newtonian and non-Newtonian fluids.
