

Ashwini Kumar :- Numerical methods in models of synchronous and induction machines and case studies in EMTP are a bonus.

Debashish Mukherjee :- The book is atypical and unique in its coverage. You will find it refreshing and new!

Gauri Shankar Banerjee :- The coverage of this book is very exhaustive, all the topics are very well covered which are hard to find in any other book. Very useful!

Neelima Arora :- If you are looking for a book on modeling and simulation algo for digital simulation & computation, look no further. This is the book!

Nimitt Karia :- An excellent book on transients with a focus on Microtan.

Rohini Singh :- This is perhaps one of the very few authoritative works on EMTP using Microtan. Highly recommended!

Shaonlee Kumar :- Every electrical having to deal with power transmission must have a copy of this book!
